PROJECTS

SAD: Segment Any RGBD 2023.04 - 2023.05

- We have developed SAD, which utilizes SAM to segment the rendered depth map, thus providing cues with enhanced geometry information and mitigating the issue of over-segmentation
- More than 500 stars on GitHub, and more than 1k Likes and 140k Views on Twitter

Multi-View 3D Surface Reconstruction 2022.01 - 2022.06

- Given multi-view images as input, our objective is to develop an algorithm for reconstructing the surface geometry and appearance of the object
- Funded by the DigiX Joint Innovation Center of Huawei-HUST

Neural Radiance Fields for Novel View Synthesis 2020.12 - 2021.12

- Our objective is to develop an algorithm that can synthesize novel views of a scene from a set of posed images, without requiring a time-consuming optimization process for each new scene
- Funded by the DigiX Joint Innovation Center of Huawei-HUST
